Our casting training  
for your company benefit

# Shaping skills. Casting the future.

---

## Training that elevates your high-pressure and low-pressure die casting processes.

Practical, hands-on programs tailored to your machines, parts, and process challenges.

We strengthen your team's technical understanding and build a solid foundation for reliable, low-defect casting processes. Delivered on-site at your facility, in our foundry lab (theory + practice), or live online – fully customized to your equipment and products.

## Possible training topics:

- Avoiding common casting defects
- Scrap reduction and process optimization
- Setting and evaluating the casting curve
- Interpreting and assessing simulation results
- Fundamentals and functions of the casting machine

**Flexible, customized, and immediately applicable** – so your team not only knows **how** it works, but **why** it works.
